

ClinMAP-VOI v0

Hosted multi-model evaluation on synthetic healthcare metamorphic probes: human domain review, relation annotations, and post-review QA audit.

3971 reviewed rows	17 models scored	0.891 mean decision accuracy	0.786 metamorphic pass rate
--	--	--	---

Methodology (in repository)

- 40 decision families · 320 variants · 280 metamorphic relations
- Annotation protocol + 6 policy-relevant dimension scores (0–4)
- Holdout QA on families CMVOI-033–040; blind-QA κ in published band
- Claim boundary: evaluation engineering demo, not safety certification

Primary artifacts

review_queue.csv · relation_annotations.jsonl · clinmap_voi_v0_performance_metrics.md · clinmap_voi_review_quality_audit.md · eval_spec/clinmap_voi_eval_spec_v0.md

QA audit summary

Holdout decision accuracy	0.9028
Full decision accuracy	0.8879
κ (primary, blind QA)	0.8382
Relation integrity	1.0
Overall QA pass	YES

Limitations

All probes are synthetic. Metrics reflect rubric policy alignment and metamorphic consistency, not patient outcomes. Empty model responses were excluded from review. Public artifacts use collected response text only.
